

Riches Metelewawon

Software Developer

[linkedin](#) | +2348104062427 | richesmetelewawon@gmail.com | [Github](#) | [Portfolio](#)

Professional Summary

Fullstack engineer with 4+ years building production-grade web applications, clinical systems, and API-driven platforms. Proven experience developing complex rule engines, integrating AI/LLM APIs, and delivering end-to-end systems in healthcare and fintech. Comfortable across React, TypeScript, PostgreSQL, and REST APIs, with a strong bias for clean architecture and real-world impact

Skills

Front End: JavaScript · TypeScript · React.js · Next.js · Tailwind CSS ·

Backend: PHP | Laravel | Java | Spring Boot | REST API Design

Database: PostgreSQL | MySQL | MongoDB (NoSQL)

Tools: Git | Github | Docker | Linux | Redis

AI / LLM Evaluation: Prompt Engineering · LLM Evaluation · Repository Auditing · Code Quality Analysis · Debugging & Investigation · Test Validation · AI-Assisted Development · Vibe Coding · AI API Integration

Other: Payment Integration | PCI-DSS | AI Integration | SDK Development

Experience

Revelo(Contract)

AI Code Evaluation Contributor

Mar 2025 - Present

- Evaluated production-style software repositories used for LLM training and benchmarking.
- Reviewed source code, test suites, and prompts to assess code quality, correctness, and architectural completeness.
- Executed and validated AI-generated solutions by reproducing model trajectories and identifying failure cases.
- Enhanced repositories through prompt-driven development ("vibe coding"), implementing missing functionality, fixing defects, and improving maintainability.
- Documented model pass/fail reasoning and annotated evaluation outcomes to improve AI training quality.
- Worked extensively with TypeScript, Python, JavaScript, debugging, testing, Git, and AI-assisted development workflows.

Spout Payment (Remote)

Software Developer

JAN 2025 - Present

- Optimised payment terminals by updating by redesigning UI labels and transaction flows, reducing transaction errors by 20%.
- Integrated banking APIs that improved transaction processing capabilities for 100+ merchant.
- Developed a bulk merchant onboarding feature, reducing manual effort by 70% and onboarding time from 3 days to a few hours.
- Integrated and deployed payment processing solutions while maintaining PCI-DSS compliance standards.
- Collaborated with senior engineers to debug critical payment processing issues, reducing operational downtime by 30%.

Outboundiq (Contract)

Software Developer

Aug 2025 - Jan 2026

- Engineered a real-time API monitoring and routing system in Laravel, improving API reliability and reducing third-party downtime by 35%.
- Implemented **role-based access control (RBAC) and audit trail systems** for projects and teams, strengthening platform security and compliance.
- Developed and published the laravel-outboundiq SDK, enabling external developers to integrate APIs seamlessly and reducing setup time by 60%.
- Integrated AI-driven API health analysis using grok, automating provider status interpretation with 90% accuracy.
- Optimized project-user role management and collective data aggregation, improving response accuracy and scalability.
- Collaborated with frontend engineers to design robust API endpoints and data models supporting the Next.js monitoring dashboard.

Gheli Technology Solution Limited

Software Developer

Oct 2023 - Apr 2026

- Designed and developed a custom double-entry accounting system for Edo Specialist Hospital, replacing commercial Sage accounting software with a fully integrated in-house platform.
- Built a complete financial reporting suite including trial balance, profit & loss, balance sheet generation, automated package posting, and manual journal workflows.
- Integrated the accounting platform with the hospital's existing e-clinic system, enabling seamless synchronization between clinical operations and financial reporting
- Automated fixed asset depreciation calculations and financial reconciliation processes, reducing manual accounting operations
- Developed REST API-driven cooperative management systems serving 2,000+ users with React/Next.js dashboards for savings plans, loan management, and administrative workflows.
- Built and deployed CRM, HRMS, and cooperative management interfaces used by 200+ businesses, improving responsiveness and operational efficiency
- Mentored 20+ junior developers in HTML, CSS, JavaScript, and React fundamentals.

TDHUB, AFIKPO (NYSC)

Web Developer Intern

Nov 2021 - Aug 2022

- Improved website performance by 22% through frontend optimization, cross-browser compatibility improvements, and accessibility enhancements.
- Optimized frontend components for responsive performance across desktop and mobile devices.
- Collaborated with department managers during implementation reviews and service improvement initiatives.
- Participated in team-building and collaborative development activities.
- Technologies used: HTML5, CSS3, Bootstrap, JavaScript, PHP, MySQL.

Notable Projects

OutboundIQ — API Intelligence Platform | *Laravel · Next.js · AI/Grok · PostgreSQL*

Link: outboundiq.dev

A real-time API monitoring and intelligence platform that detects third-party API failures before they affect end users by correlating provider status pages with live transaction data.

- Built the real-time API monitoring and routing engine in Laravel, reducing third-party downtime by 35%.
- Integrated AI-driven provider health analysis using Grok LLM with 90% interpretation accuracy.
- Developed and published the [laravel-outboundiq](#) SDK, reducing integration setup time by 60%.
- Implemented RBAC and audit trail systems for improved security and operational visibility.
- Collaborated on a real-time Next.js monitoring dashboard powered by scalable API endpoints and data models.

Edo Specialist Hospital — Clinical Accounting System | *PHP · Laravel · MySQL · REST API*

A custom-built accounting and financial operations platform developed for a 200-bed government hospital to replace commercial accounting software.

- Designed and implemented a full double-entry accounting and procurement workflow engine for a 200-bed government hospital.
- Built multi-stage vendor management and approval workflows covering purchase requests, vendor selection, audit review, accounting validation, and executive approvals.
- Developed automated procurement-to-finance processes where approved purchases generated Goods Received Notes (GRNs), inventory records, and corresponding ledger postings in real time.
- Implemented dynamic approval chains across procurement officers, auditors, accountants, and executive management, enforcing role-based financial controls and accountability.
- Engineered automated ledger posting workflows for procurement, asset, and expense transactions while supporting controlled manual journal postings with approval validation before entry into the general ledger.
- Built financial reporting modules including trial balance, profit & loss, balance sheet generation, and reconciliation workflows.
- Automated fixed asset depreciation calculations and financial reconciliation processes, reducing manual accounting overhead.
- Integrated the accounting platform with the hospital's existing e-clinic system, enabling unified operational and financial reporting across departments.
- Delivered role-based workflows supporting accounting, audit, procurement, inventory, and executive management teams

Education

Federal Polytechnic Auchi

Higher National Diploma (UPPER CREDIT)

Major in Mechanical Engineering(Power and Plant)

Nov 2018 - Jun 2021

Certification

Udacity Nano-degree Fullstack Developer

Web Development Bootcamp Certificate

Leadership And Emotional Intelligence

Udacity

Udemy

Coursera

May 2022 – Aug 2022

Jan 2022 – Jun 2022
